

Technical Platform Overview

Codility is your go-to solution to effectively and efficiently identify qualified programmers in your pipeline, so you can connect with the strongest candidates. Use our robust skills assessment platform to save time and engineering resources, and empower your recruiters.

Back-end Engineers
Front-end Engineers
Web Developers
UX Designers
AI Developers
Mobile Developers
Data Scientists
DevOps Engineers
QA Engineers

Create tests

to assess technical skills
and knowledge

Invite candidates

to complete in their own
time, or in a live session

Receive reports

automatically scored,
with full code playback

Plagiarism protection and detection

We've been developing our anti-cheating methods for over 6 years and are constantly monitoring for leakages of our task prompts and solutions. Our Similarity Checker cross-checks every new solution against our entire database of submissions, and if we see anything suspicious our tech team will take a closer look and reach out to you when appropriate. With Codility, you can ensure your candidates' work is their own.

Objective-C

Technical Skills

You can utilize the **Codility Task Library** or **create your own Custom Tasks** to gain insights into each of your candidates' real-life technical skills.

Codility helps you assess not only the **correctness** of candidates' code, but also **performance** and **style**, so you can see whether the code they write is also scalable and clear.

Technical Knowledge

Codility Multiple Choice Questions are designed to give you deeper insights into your candidates' understanding of technologies like; **Git, Linux, Java, Spring** and disciplines like **Data Science**. You can also create your own multiple choice questions.

Subjective Elements

If you want to ask more, create your own short text, long-form or multiple choice questions, or ask candidates to upload a file directly.

Assessment Methods

We recommend a **candidate-centric approach**, where the assessment method is changed based on your **recruitment scale**, the **seniority of the role**, and the **level of engagement** you have with candidates. From **take home CodeCheck tests**, to **collaborative CodeLive sessions**, we give you a full suite of tools.
